High-Efficiency Stainless Steel Standard Pump

This stainless steel centrifugal pump is engineered for superior durability and corrosion resistance in professional fluid transfer applications. Featuring high-efficiency motor technology and premium NSK bearings, it ensures reliable, continuous service in demanding industrial, civil, and agricultural environments. Designed for compatibility with clean and aggressive liquids, this pump provides a versatile solution for pressure boosting, firefighting, and water circulation systems.

Technical Specifications

Operating Limits

-10 °C to +120°C
Liquid Temp

50 °C max
Ambient Temp

16 bar
Max Pressure

Motor Features

- YE3 High-efficiency motor
- Protection Class: IP55
- Insulation Class: F
- Square and round motor options
- Continuous service (S1)

Materials

Stainless Steel AISI 304, SS 316 (Optional), Wear-resistant mechanical seal

Applications

Recommended Use Cases

Water Supply, Firefighting Systems, Pressure Boosting, Irrigation, Industrial Processing, Climatisation Water Circulation
