

Stainless Steel Steam Jacketed Kettle

This stainless steel steam jacketed kettle is designed for food processing applications. It is equipped with a pressure gauge, control valves, and a drain valve for efficient operation and maintenance.

Product Overview

High-Efficiency Steam Jacketed Kettle

This stainless steel steam jacketed kettle is engineered for demanding food and beverage processing applications. Designed for versatility, it excels at cooking, mixing, and heating a wide variety of products with precise temperature control. The robust construction includes a stainless steel frame with adjustable legs, ensuring stability and long-term durability in professional kitchen or industrial environments.

Technical Specifications

Material	Stainless Steel
Primary Applications	Food Processing, Beverage Production, Cooking, Mixing, Heating

Operational Features

Key Components

- Pressure Gauge
- Control Valves
- Drain Valve

Design & Build

Mounting	Stainless steel frame with adjustable legs
