

Stainless Steel Submersible Deep Well Pump

This submersible pump is made entirely of stainless steel and designed for extracting water from deep wells. Its robust motor and hydraulic design ensure reliable performance in demanding conditions.

Overview

Professional Grade Submersible Pump

This all-stainless steel submersible deep well pump is engineered for efficient and reliable water extraction from deep wells. Constructed with high-grade materials, it offers superior durability and corrosion resistance, making it an ideal choice for demanding environments. Its robust motor and optimized hydraulic design ensure consistent performance across irrigation, municipal water supply, and various industrial applications.

Technical Specifications

Series	10SP Series
Pump Diameter	10 inches

Construction

Material	Stainless Steel
----------	-----------------

Applications

Primary Applications

- Irrigation
- Water Supply
- Industrial Use

Performance

Key Performance Features

Corrosion Resistant • High Durability • Robust Motor • Submersible Design
