

Stainless Steel Submersible Drainage Pump with Float Switch

This submersible pump is made of stainless steel and designed for drainage applications. It features a float switch for automatic operation and protection against dry running.

Product Overview

Robust Submersible Drainage Solution

This stainless steel submersible pump is engineered for efficient water drainage in demanding environments, including basements and construction sites. It features an integrated float switch for fully automatic operation, which effectively prevents dry running and ensures reliable performance. Built with durable, corrosion-resistant materials, this unit is an ideal choice for managing clean or slightly dirty water.

Technical Specifications

Operation

Automatic • Submersible

Construction Material

Stainless Steel

Key Features

Float Switch, Dry Run Protection, Corrosion Resistant

Application

Suitable Environments

- Basements
- Construction Sites
- Flood-prone areas

Water Compatibility

Clean or slightly dirty water
