

# Stainless Steel Submersible Water Pump

This submersible pump is made of stainless steel. It is designed for deep well, borehole, and general water transfer applications.

## Product Overview

### Professional Grade Submersible Pumping Solutions

These high-quality stainless steel submersible pumps are engineered for demanding industrial and domestic applications. Utilizing advanced international design standards, the units provide exceptional durability, corrosion resistance, and operational reliability in deep well and water transfer scenarios. With a massive annual production capacity and proven global export reach, these pumps serve as a trusted solution for diverse water management needs.

## Manufacturing and Quality

### Annual Production

**500000 Units**

Annual Output

### Certifications

ISO 9001:2000, CCC, CE

### Intellectual Property

20 Patents

## Technical Specifications

### Available Types

- Well Submersible Pumps
- Submersible Motors

### Primary Material

Stainless Steel

## Market Reach

### Global Distribution

Europe • America • Africa • Middle East • South East Asia
