

Steel Roof Tile Forming Machine

The steel roof tile making machine efficiently produces high-quality steel roof tiles. This robust machine features a roll forming system, precision cutting mechanism, and automated material handling.

Product Overview

High-Efficiency Steel Roof Tile Forming Machine

This professional-grade roll forming machine is engineered for the high-speed production of steel roof and wall panels. Designed for reliability in large-scale construction environments, it features precise automated systems that ensure consistent tile dimensions and profile accuracy. The machine is built for durability and supports diverse steel gauges, making it a versatile asset for modern roofing projects.

Technical Specifications

Production Speed

10 m/min

Speed

Power Consumption

5.5 kW

Voltage

380V, 3 phase

Physical Dimensions

Dimensions (L x W x H)

6600 x 1400 x 1300 mm

Manufacturing Details

Support Services

- 1-year warranty
- Engineers available to service machinery overseas

Origin

Hebei, China

Quality Certifications

BV, New
