

Steel Wire Reinforced Multi-Conductor Cable

This multi-conductor cable features a durable outer jacket reinforced with steel wire. Inner conductors are color-coded for easy identification in communication and data transmission applications.

Product Overview

Robust Multi-Conductor Communication Cable

This steel wire reinforced cable is engineered for durability in harsh environments, featuring superior mechanical and temperature characteristics. Its robust steel wire armor provides essential protection against rodent damage, while advanced water-blocking materials ensure long-term reliability. Suitable for both duct and direct-buried installations, this cable offers excellent tensile and crush resistance for secure data transmission.

Physical Properties

Reinforcement Type	Steel wire armored
Moisture Mitigation	Water blocking tape, Water blocking yarns, Gel-free design

Design and Structure

Construction Features

- Outer protective sheath
- Inner sheath layer
- Steel wire armor layer
- Central strength member
- Loose tube fiber core
- Integrated ripcord

Applications

Recommended Installation

Duct Laying • Buried Laying
