

# Straight Eight Main Reducer Gearbox

This straight eight main reducer is designed for heavy machinery and industrial applications. The multi-stage gearbox features a complex arrangement of gears and bearings housed within a durable casing for high torque and power transmission.

## Product Overview

### Straight Eight Main Reducer Gearbox

The Straight Eight Main Reducer is a robust, multi-stage gearbox engineered for demanding industrial applications requiring high torque and consistent power transmission. Featuring a modular design with durable casing, this reducer is optimized for reliability in heavy machinery environments. Its versatile input and output shaft configuration allows for seamless integration into complex power train systems.

## Technical Features

Design Type	Straight Eight Multi-stage
Application	Heavy Machinery, Industrial Power Transmission

## Construction

### Maintenance

- Modular architecture
- Accessible bolt patterns
- Integrated bearing housing

Finish	Corrosion-resistant light color coating
