

Submersible Borehole Water Pump

This submersible borehole water pump is designed with a multistage centrifugal mechanism for efficient water extraction from boreholes and wells. Its stainless steel construction ensures durability and resistance to corrosion, making it suitable for domestic, irrigation, and industrial applications.

Overview

High-Performance Submersible Pump

The 4SP2 series is a multistage centrifugal pump engineered for reliable water extraction from boreholes, wells, and tanks. Constructed from durable stainless steel, it offers excellent corrosion resistance and long-term reliability for demanding environments. Its high-efficiency hydraulic design makes it an ideal solution for domestic water supply, irrigation systems, and various industrial applications.

Key Features

Key Features

- Built-in check valve
- Sand-resistant construction
- Stainless steel build
- High-efficiency motor
- Easy installation

Suitable Applications

Domestic Water Supply, Irrigation, Industrial Use

Technical Details

Construction Material

Stainless Steel

Pump Type

Multistage Centrifugal Submersible
