

Submersible Clean Water Sump Pump with Float Switch

This submersible pump efficiently removes clean water. It is ideal for draining pools, ponds, basements, and other areas where clean water accumulates.

Product Overview

Clean Water Efficiency

This submersible pump is designed for the efficient removal of clean water from environments such as pools, ponds, and basements. Equipped with a robust copper wire motor and an integrated float switch, it provides reliable, automatic operation while preventing dry running. Its compact, durable design makes it an ideal solution for professional water management applications.
