

Submersible Deep Well Pump

This submersible pump is designed for deep well applications. The stainless steel components provide durability and corrosion resistance for water extraction in industrial and agricultural settings.

Product Overview

Industrial Submersible Performance

This submersible deep well pump is engineered for efficient water extraction in demanding industrial and agricultural environments. Built with high-grade stainless steel components, it offers superior corrosion resistance and long-term durability. Its advanced multi-stage design ensures high-performance water lifting, while the robust motor provides the reliable operation necessary for intensive usage.

Technical Features

Suitable Applications

- Industrial water extraction
- Agricultural irrigation
- Deep well pumping

Construction Material	Stainless Steel
Pump Architecture	Multi-stage submersible

Performance

Key Benefits

Corrosion Resistant • High Efficiency • Long Service Life • Robust Motor
