

# Submersible Deep Well Water Pump

This submersible deep well pump is designed for efficient water extraction from deep wells. Its stainless steel construction ensures corrosion resistance and long-lasting performance.

## Overview

### High-Performance Submersible Deep Well Pump

This submersible deep well pump is engineered for efficient and reliable water extraction in residential, agricultural, and industrial settings. Featuring a robust stainless steel construction, it offers superior corrosion resistance and long-term durability. The integrated multi-stage impeller system and high-efficiency motor ensure consistent water flow and pressure, while built-in safety features like thermal protection and a suction screen enhance operational longevity.

## Technical Specifications

### Key Design Features

- Multi-stage impeller for superior performance
- Special sand guard for sand handling
- Built-in suction screen
- Built-in check valve to prevent backflow
- Stainless steel construction

<b>Motor Type</b>	Hermetically sealed with built-in thermal protector
<b>Power Supply Options</b>	1 Phase, 3 Phase, 50 Hz, 60 Hz

## Applications

### Suitable Applications

Residential • Agricultural • Industrial
