

Submersible Deep Well Water Pump

This submersible deep well water pump is engineered for efficient water extraction from deep wells. Its robust construction ensures durability and reliable performance for irrigation, domestic water systems, and industrial uses.

Overview

High-Efficiency Submersible Water Extraction

This submersible deep well water pump is engineered for reliable and efficient water extraction in demanding environments. Its robust construction ensures long-lasting performance, making it suitable for a variety of applications including irrigation, domestic water systems, and industrial use. The submersible design provides quiet operation and protection from external elements, while the high-efficiency motor optimizes energy consumption for cost-effective operation.

Technical Specifications

Key Operational Features

- Submersible design for quiet operation
- Robust construction for durability
- High-efficiency motor
- Easy installation and maintenance

Series Model	85QJD
Primary Applications	Irrigation, Domestic Water Systems, Industrial Use
