

Submersible Deep Well Water Pump

This submersible deep well pump is designed for efficient water extraction. It features stainless steel construction for durability and corrosion resistance.

Product Overview

Submersible Deep Well Pump

This submersible deep well pump is engineered for efficient water extraction, featuring a durable stainless steel construction for enhanced corrosion resistance. It is designed to support a wide range of applications, from domestic water supply and irrigation to construction and industrial water conservancy systems. With reliable performance metrics, this unit offers a versatile solution for professional water management needs.

Technical Specifications

Power Supply	220V, 50Hz
Motor Power	0.37 kW
Flow Rate Range	15-35 L/min
Head Range	27-54 m

Operating Limits

Max Ambient Temperature	40 °C
pH Range	6.5 to 8.5
Max Depth Below Static Water Table	80 m

Application Fields

Primary Applications	Building Construction, Domestic Water Supply, Irrigation, Landscaping, Water Conservancy, Industrial
----------------------	--

Key Features

Construction Material
Stainless Steel
