

# Submersible Dewatering Pump

This submersible dewatering pump is designed for efficient water removal from demanding applications such as construction sites and mines. It features robust cast iron construction, a high-capacity impeller, and a powerful motor for reliable performance in harsh environments, and it is suitable for pumping water containing solids and debris.

## Product Overview

### Professional Dewatering Performance

This heavy-duty submersible dewatering pump is engineered for high-efficiency water removal in demanding industrial and infrastructure environments. Built with a robust cast iron housing, it is designed to withstand the harsh conditions found in construction sites and mining operations. Its high-capacity impeller ensures consistent performance even when processing water containing significant solids and debris.

## Technical Specifications

Housing Material	Cast Iron
Operational Suitability	Construction Sites, Mining, Dewatering, Heavy-duty
Fluid Compatibility	Water containing solids and debris

## Features

### Installation Features

- Robust cast iron construction
- High-capacity impeller
- Integrated lifting lugs for easy deployment
- Powerful motor for reliable performance
