

Submersible Drainage Pump for Irrigation

This submersible pump is designed for efficient drainage and irrigation. Its robust construction ensures durability in demanding agricultural environments.

Product Overview

High-Efficiency Submersible Drainage Pump

This submersible water pump is specifically engineered to handle demanding agricultural drainage and irrigation tasks with maximum efficiency. Its robust construction ensures long-term durability, while the high-performance motor provides consistent, reliable operation in various field conditions. Designed for versatility, this pump is an ideal solution for dewatering, large-scale irrigation, and wastewater removal applications.

Performance Metrics

Performance Highlights

1 Submersible

Operation Type

1 Agricultural

Primary Application

Technical Details

Design Advantages

- Robust construction for durability
- High-performance motor
- Compact design for portability
- Easy installation

Suitable Applications

Dewatering, Irrigation, Wastewater Removal
