

Submersible Drainage Pump

This heavy-duty submersible pump is designed for efficient drainage and irrigation. Its robust construction ensures reliable performance in demanding environments.

Product Overview

Professional Drainage Solution

This heavy-duty submersible pump is engineered for demanding drainage and irrigation applications in challenging environments. It provides reliable performance for moving wastewater and fluids containing solids, making it an essential tool for construction sites, mines, and industrial operations. With its powerful motor and high-capacity impeller, the unit ensures consistent flow rates and optimal head pressure.

Technical Capabilities

Key Features

- Robust heavy-duty construction
- High flow rate efficiency
- Solid-handling impeller design
- Submersible operation

Performance Rating

Heavy-Duty • Industrial Grade

Industry Applications

Construction, Mining, Industrial Wastewater, Irrigation
