

Submersible Drainage Water Pump

This submersible water pump is designed for drainage and irrigation. It features a corrosion-resistant housing and a stainless steel strainer base.

Product Overview

Professional Drainage and Irrigation Solution

This submersible water pump is engineered for efficient drainage and irrigation, featuring a robust, corrosion-resistant housing designed for long-term reliability. Equipped with an integrated float switch, it provides secure, automatic operation that effectively prevents dry running. Its stainless steel strainer base ensures durability, making it an ideal choice for managing clean or slightly contaminated water in environments like basements and pools.

Technical Specifications

Water Compatibility

- Clean water
- Slightly contaminated water

Safety Features

Float Switch • Dry-Running Protection • Corrosion-Resistant Housing

Material Components

Component	Material Property
Housing	Corrosion-Resistant
Strainer Base	Stainless Steel

Typical Applications

Drainage, Irrigation, Basement Dewatering, Pool Maintenance
