

Submersible Float Switch for Water Pumps

This submersible float switch is designed for automatic water pump control. It features durable construction for reliable operation in various water conditions, making it ideal for drainage, irrigation, and general water management.

Product Overview

Submersible Float Switch for Water Pumps

This submersible float switch is engineered for reliable, automatic control of water pump systems. Designed to withstand diverse aquatic environments, it ensures consistent operation for drainage, irrigation, and large-scale water management. Its durable construction offers a robust solution for professional infrastructure projects requiring automated fluid level regulation.

Key Features

Design Advantages

- Fully submersible design
- Automatic switching mechanism
- Durable moisture-resistant construction
- Suitable for diverse water conditions

Applicable Use Cases

Drainage, Irrigation, Water Management

Performance
