

Submersible Sewage Pump for Construction and Mining

This submersible sewage pump is designed for use in construction and mining applications. It features a non-clogging impeller for pumping dirty water.

Product Overview

Rugged Submersible Performance

This submersible sewage pump is engineered for heavy-duty applications in construction, mining, and municipal wastewater management. Featuring a non-clogging impeller design and a robust cast iron housing, it ensures consistent flow and reliability under demanding conditions. The integration of high-grade materials like stainless steel and silicon carbide seals provides superior resistance to corrosion and wear in harsh environments.

Technical Specifications

Housing Material	Cast Iron
Impeller Design	Closed non-clogging
Mechanical Seal	SiC/SiC
Shaft Material	SS304 Stainless Steel

Components

Bearing Type	C&U
--------------	-----

Applications

Primary Applications	Construction, Mining, Municipal Wastewater, Agricultural Drainage, Industrial Effluent
