

Submersible Sewage Pump for Wastewater Handling

This submersible sewage pump is designed for handling wastewater and sewage in various applications. It is constructed with durable materials, featuring a robust motor and impeller for efficient solids handling and reliable operation.

Product Overview

Professional Submersible Sewage Pump

This submersible sewage pump is engineered for efficient wastewater and sewage management in residential, commercial, and industrial environments. It features a robust motor and specialized impeller design to ensure high solids handling capacity and reliable operation. Built with high-durability materials, it provides a dependable solution for drainage and the removal of effluent and non-corrosive liquids.

Key Features

Fluid Compatibility

- Wastewater
- Sewage
- Effluent
- Non-corrosive liquids

Application Areas

Residential, Commercial, Industrial
