

Submersible Sewage Pump for Wastewater Handling

This submersible pump is designed for handling various kinds of wastewater. Its wide tunnel impeller facilitates the transfer of long fibers and solids up to 38mm in diameter.

Product Overview

Professional Wastewater Handling

This submersible sewage pump is engineered for the efficient and reliable removal of wastewater in both residential and commercial settings. Featuring a durable cast-iron construction, the unit is designed to withstand harsh environments while maintaining consistent performance. Its non-clog impeller technology ensures the passage of solids, preventing blockages and reducing maintenance requirements in demanding pumping tasks.

Operating Limits

Maximum Submersion Depth	5 m
Max Liquid Temperature	40
Liquid PH Range	6-8
Max Liquid Density	1200 kg/m ³

Features

System Highlights	Cast Iron Construction, Non-clog Impeller, Automatic Float Switch Option, High Head Pressure
-------------------	--

Applications

Suitable Applications

- Septic Systems
- Effluent Pumping
- Dewatering
- Residential Wastewater
- Commercial Sewage Removal
