

Submersible Sewage Water Pump

This submersible sewage pump is designed for efficient and continuous operation. It features a durable construction capable of handling abrasive and corrosive fluids.

Product Overview

Reliable Submersible Sewage Pumping

This submersible sewage pump is engineered for the efficient handling of dirty and wastewater. Its durable design ensures reliability for critical applications such as discharging domestic waste and clearing collection traps. The unit is optimized for handling solid particles up to 35mm, providing a versatile solution for drainage and waste management tasks.

Performance Specifications

Max Particle Diameter	35 mm
Typical Applications	Dirty Water Clearing, Domestic Wastewater, Collection Trap Emptying, Drainage, Irrigation

Key Features

Capabilities

- Robust and reliable wastewater handling
- Continuous operation capability
- Handles abrasive fluids
- Submersible design for easy installation
- High-performance impeller
