

Submersible Vibration Mask Pump VM60

The VM60 vibration mask pump is a submersible pump designed for efficient water removal. Its robust construction ensures durability and reliable performance.

Product Overview

Professional Submersible Performance

The VM60 is a high-performance submersible vibration mask pump engineered for demanding water removal tasks. Its robust design and corrosion-resistant housing make it an ideal choice for basement drainage, construction sites, and emergency flood mitigation. Built for reliability, this unit ensures effective water displacement and consistent operation in challenging environments.

Technical Specifications

Construction Features

- Corrosion-resistant housing
- High-durability design
- Submersible configuration
- High-performance motor

Suitable Applications

Basement Drainage, Construction Sites, Flood Mitigation, Submersible Operations
