

Submersible Water Pump for Fountains and Ponds

This submersible water pump is suitable for various applications, including fountains, ponds, and irrigation systems. It features a stainless steel housing for durability and corrosion resistance.

Product Overview

Professional Submersible Water Pump

This versatile submersible water pump is engineered for reliable performance in fountains, ponds, and irrigation systems. Built with a robust stainless steel housing, it offers exceptional durability and corrosion resistance for both indoor and outdoor environments. The unit includes a transformer for enhanced safety and features an adjustable flow rate with a spray nozzle for customizable water patterns.

Technical Specifications

Housing Material	Stainless Steel
Key Features	Submersible, Corrosion Resistant, Adjustable Flow Rate, Indoor/Outdoor Use

Operational Details

Recommended Applications

- Fountains
- Ponds
- Irrigation systems

Safety Equipment	Included transformer
