

Submersible Water Pump for Irrigation

This heavy-duty submersible pump is designed for drainage and irrigation applications. The pump is engineered for efficient and reliable water transfer in demanding environments and is capable of handling solids and debris.

Product Overview

Professional Submersible Irrigation Pump

This heavy-duty submersible pump is engineered specifically for reliable water transfer in demanding agricultural and drainage environments. Designed with a robust construction, it effectively manages water containing solids and debris, ensuring consistent performance. Its streamlined design facilitates easy installation and maintenance, significantly reducing operational downtime for irrigation and flood control systems.

Key Features

Construction Highlights

- Heavy-duty robust chassis
- Handles solids and debris
- Engineered for high-reliability
- Low-maintenance design

Suitable Applications

Agricultural Irrigation, Dewatering, Flood Control, Drainage

Operational Performance

Performance Overview

1 capable

Debris Handling
