

# Submersible Water Pump with Inverter Motor

This submersible pump features a permanent magnet inverter motor for efficient and reliable operation. It is designed for demanding applications such as water transfer, drainage, and sewage handling.

## ADDITIONAL IMAGES

## Product Overview

### High-Efficiency Submersible Pumping Solution

This submersible pump utilizes advanced permanent magnet inverter motor technology to deliver superior performance for industrial and municipal water transfer. Engineered for demanding environments, it combines high flow rate capabilities with significant energy savings and reduced operational noise. With integrated safety features like dry running and overheat protection, this pump ensures long-lasting durability and minimal maintenance requirements.

## Technical Specifications

Motor Type	Permanent magnet inverter motor
Core Features	Dry running protection, Overheat protection, Energy saving, Low noise

## Performance

### Operational Highlights

**1 High**  
Efficiency

**1 Low**  
Noise Level

**1 High**  
Flow Rate

## Design and Build

### Design Advantages

- Compact size
- Robust construction
- Integrated protective strainer
- Easy-carry handle
- Discharge pipe connectivity
