

# Submersible Water Transfer Pump

This is a submersible water pump designed for efficient water extraction and transfer. It features a robust cylindrical body with a protective strainer to prevent debris from entering the pump.

## Product Overview

### High-Efficiency Water Transfer

This submersible water pump is engineered for reliable water extraction and transfer in demanding environments. It features a robust, durable cylindrical body designed to withstand heavy usage, paired with an integrated protective strainer to prevent debris intake. The unit is a versatile solution suitable for a wide range of professional applications, including irrigation, industrial drainage, and general fluid management.

## Technical Specifications

### Construction Features

- Robust cylindrical housing
- Durable materials for longevity
- Integrated debris protection strainer

<b>Pump Type</b>	Submersible
<b>Primary Applications</b>	Irrigation, Drainage, Water Transfer
