

Sugar Refinery Plant

This plant is designed for modern sugar processing and refining. It is a large-scale facility with advanced processing units and storage capabilities.

ADDITIONAL IMAGES

Overview

Modern Sugar Manufacturing Solutions

This industrial solution provides a comprehensive approach to modern sugar refinery construction, utilizing advanced exudation methods. The facility integrates sophisticated global equipment with highly automated control technology to ensure supreme efficiency. Designed for large-scale production, these plants are engineered to meet international standards for the sugar manufacturing industry.

Technical Capabilities

Production Capacity

750000 tons

Annual Urea Production

Core Technologies

Advanced Exudation Method, Automated Control Systems, Integrated Processing

Project History

Major Project Contracts

Region	Contract Value (USD)
Guyana	> \$100 Million
Vietnam	~\$574 Million
