

Super Thin Metal Cutting Wheel - 125 x 1.0 x 22.23 mm

This super thin metal cutting wheel is designed for precision cutting of steel and other metals. It features a reinforced abrasive matrix for enhanced durability and safety at high operating speeds.

Product Overview

High-Performance Cutting Solution

This super thin 125mm cutting wheel is engineered for high-speed precision tasks on structural, high-tensile, and tool steels. Its design prioritizes efficiency and comfort, delivering long-lasting performance while minimizing burr development. Ideal for tubes, profiles, and solid materials, it ensures a clean and professional finish for demanding metal fabrication projects.

Technical Specifications

Dimensions

125 mm

Diameter

1 mm

Thickness

22.23 mm

Bore Size

Operating Limits

80 m/s

Max Operating Speed

12250 rpm

Max RPM

Material Composition

A46T5BF41, Reinforced Abrasive Matrix

Compliance and Standards

Safety Standards

EN 12413

Usage Applications

Supported Materials

- Structural steels
- High tensile steels
- Tool steels
- Concrete reinforcing iron (rebar)

Typical Applications

- Tubes
- Profiles
- Steel sheets
- Flat iron
- Solid material
