

# Suspended Access Platform

This suspended platform offers a temporary access solution for building maintenance, construction, and aerial work. It is designed for straightforward setup, disassembly, and relocation, delivering a secure and productive environment for elevated operations.

## Product Overview

### Versatile Aerial Access Solution

The ZLP Suspended Platform provides a safe and efficient temporary access solution for high-rise building maintenance, construction, and diverse aerial work requirements. Designed for rapid installation and mobility, it features a modular structure comprising a suspension mechanism, reliable hoists, and integrated safety locks. This system ensures workers have a stable environment while operating at significant heights.

## Technical Specifications

### Core Components

- Suspended platform frame
- Suspension mechanism
- Lifting hoist
- Safety locks
- Electrical control system
- Steel wire ropes

### Construction Materials

Steel, Aluminum

## Key Performance Metrics

### Operational Focus

**1 High-rise**

Primary Application

## Safety and Compliance

### Safety Equipment

Safety Locks • Electrical Control System • Secure Wire Rope Suspension
