

Sweet Corn Kernel Thresher

This sweet corn thresher is designed for the efficient removal of kernels from fresh corn cobs. Its stainless steel construction ensures hygiene and durability for food processing applications.

Product Overview

Industrial Corn Threshing Solution

This sweet corn thresher is engineered for the efficient and gentle removal of kernels from fresh corn cobs in professional food processing environments. Constructed with high-grade stainless steel, the machine ensures hygiene, long-term durability, and reliable performance. It features an automated feeding mechanism and an intuitive control panel, significantly reducing manual labor while increasing processing speed for small to medium-scale operations.

Technical Specifications

Operating Voltage	220V
Operating Frequency	50 Hz
Machine Weight	200 kg
Construction Material	Stainless Steel

Features

Operational Capabilities

- Automated feeding mechanism
- Gentle kernel removal system
- Integrated control panel for settings adjustment
- Separated discharge for kernels and cobs
- Mobile frame with integrated wheels

Suitability

Fresh Corn Processing • Food Factory • Small-Medium Scale
