

Swimming Pool and Spa Circulation Pump

This water pump is designed for circulation in jetted bathtubs, spa pools, and swimming pools. It can also be used in massage stations and cleaning systems.

Product Overview

Professional Circulation Solution

This high-performance circulation pump is specifically engineered for reliable water management in swimming pools and spas. Designed for operational efficiency, it features a 2-inch inlet and outlet configuration that maximizes flow performance while minimizing noise levels. The integration of a thermal overload protector ensures long-term durability and safety, making it a robust choice for continuous use in professional aquatic environments.

Technical Specifications

Inlet and Outlet Size	2 inches
Safety Features	Thermal Overload Protector, Capacitor Running

Performance

Performance Highlights

2 inch
