

SYV-50 Series RF Coaxial Cable

The SYV-50 series RF coaxial cable features solid polyethylene insulation. It is designed for radio frequency signal transmission, ensuring reliable signal integrity.

Product Overview

High-Performance RF Coaxial Solution

The SYV-50 series is a professional-grade radio frequency coaxial cable designed for reliable signal transmission in demanding communication environments. Featuring robust solid polyethylene insulation, these cables are engineered to maintain signal integrity and minimize attenuation. Their durable construction ensures consistent performance and longevity for a variety of mission-critical networking and radio frequency applications.

Technical Specifications

Characteristic Impedance	50 ©
Insulation Material	Solid Polyethylene
Core Applications	Radio Frequency, Signal Transmission, Communication Systems
