

Tank Fire Engine

The tank fire engine is designed for rapid response and effective firefighting. It features a robust chassis and a high-capacity water tank.

Overview

Rapid Response Firefighting Capability

The RY5155GXFSG50 tank fire engine is engineered for rapid emergency response and high-performance firefighting operations. Combining a robust, maneuverable chassis with a high-capacity water tank and powerful pumping system, it is designed to handle demanding urban and industrial environments effectively. This unit provides integrated storage solutions for essential equipment, ensuring firefighters have all necessary tools readily available at the scene.

Technical Specifications

Key Design Features

- Robust chassis construction
- High-capacity water storage
- High-pressure pumping system
- Compact maneuverable profile
- Integrated equipment storage

Suitable Applications

Municipal Fire Departments, Industrial Facilities, Emergency Response

Quality & Compliance

Quality Level

High Quality
