

Tea Beverage Production Line

This tea beverage production line is designed for efficient and consistent tea processing. It integrates multiple stages including mixing, brewing, filtration, and storage.

Overview

Professional Tea Beverage Production Line

This industrial-grade tea beverage production line is engineered for the seamless processing of diverse tea leaves and powder raw materials. The system utilizes an integrated sequence of operations including extraction, cooking, grinding, and homogenization to ensure high-quality beverage output. Designed for reliability and precision, the line features a complete network of stainless steel vessels and fluid control components for consistent production standards.

Process Capabilities

Supported Processing Stages

- Dilution
- Extraction
- Cooking
- Grinding
- Homogenization
- Degassing
- Filling

System Configuration

Material Grade

Stainless Steel

Integrated Components

Stainless Steel Tanks, Pressure Gauges, Precision Valves, Fluid Piping
