

Telecommunication System with Modular Design

Electronic communication system equipped with circuit boards and various interfaces. It features a modular design and multiple ports, suitable for integration into extensive telecommunication networks.

Product Overview

Modular Telecommunication Infrastructure

This advanced telecommunication system features a highly flexible modular architecture designed for seamless integration into larger network environments. Equipped with specialized circuit boards and a versatile array of interfaces and connectors, it provides reliable connectivity for professional applications. Its robust design is engineered to support high-density signal management, making it an ideal choice for complex system deployments.

Technical Specifications

Key Features

- Modular architecture for scalability
- Integrated circuit board design
- High-performance connector array
- Rack-mount compatible

System Component Codes

FONC, SOFT, CALM1, MTDR BDU, CSEE, U RACK, IRS

Interface Density

32962 ports
