

Telescoping Radio Antenna

This is a telescoping antenna used for receiving radio signals. It features a multi-section telescoping mast, allowing for adjustable length and optimal signal reception.

Overview

Professional Telescoping Antenna

The JBA-506 is a high-quality telescoping antenna designed for reliable radio signal reception in mobile and automotive environments. Featuring a durable multi-section mast, this antenna allows for precise length adjustments to achieve optimal signal clarity. Its robust mounting base and sleek, professional design make it an ideal choice for various communication applications.

Technical Specifications

Model Number	JBA-506
Design Type	Telescoping Multi-section Mast
Application Suitability	Automotive, Mobile Communication, Radio Reception

Physical Characteristics

Construction Materials

- Silver-finish telescoping mast
- Black protective housing base

Key Features

Adjustable Length • Signal Optimization • Durable Base Mount
