

Temperature Controlled Wine Storage Unit

This temperature-controlled wine storage unit is designed to maintain optimal conditions for preserving and aging wine. Features include precise temperature control, UV-resistant glass door, low-vibration compressor, and adjustable shelving to accommodate various bottle sizes.

Product Overview

Professional Wine Storage Solutions

This temperature-controlled wine storage unit is expertly designed to maintain the optimal environment for both preserving and aging fine wine collections. It incorporates advanced features such as precise temperature regulation, a UV-resistant glass door, and a low-vibration compressor to protect wine integrity. Built for versatility, the unit includes adjustable shelving to accommodate various bottle sizes, making it an ideal choice for both high-end residential settings and commercial hospitality environments.

Technical Specifications

Cooling System	Low-vibration compressor
Door Technology	UV-Resistant, Glass Door
Shelving	Adjustable

Application

Suitable Environments

- Residential wine collections
- Commercial hospitality venues
- Fine dining establishments
