

# Thermal Power Plant

This is a thermal power plant used for electricity generation. The plant includes key infrastructure such as a smokestack, turbine hall, and cooling towers.

## Project Overview

### First Phase Operational Infrastructure

This facility represents the first phase of a comprehensive thermal power generation project. The infrastructure is designed for high-efficiency energy production and includes critical components such as the main turbine hall, cooling towers, and essential auxiliary buildings. It is engineered for long-term operational readiness and sustainable site integration.

### Operational Status

Phase I • Operational

## Key Infrastructure

### Facility Components

- Smokestack
- Turbine Hall
- Cooling Towers
- Auxiliary Buildings
