

Thermostatic Radiator Valve with Adjustable Temperature

This thermostatic radiator valve regulates room temperature by adjusting hot water flow to the radiator. It features adjustable temperature settings and is designed for vertical installation.

Overview

Energy-Efficient Temperature Control

This thermostatic radiator valve (TRV) is a self-regulating solution designed for hot water heating systems, allowing for precise individual room temperature management. Engineered with a high-quality liquid sensor and manufactured to EN-215 standards, it provides an A-rating energy grade to help reduce heating costs. The valve automatically adjusts hot water flow to maintain user-defined comfort levels without requiring manual boiler adjustments.
