

# Thermostatic Radiator Valve with Liquid Sensor

This thermostatic radiator valve uses a liquid sensor to control temperature. It features a plastic head and is designed for hot water heating systems.

## ADDITIONAL IMAGES

## Overview

### High-Efficiency Temperature Control

This Thermostatic Radiator Valve (TRV) is a self-regulating solution designed for hot water heating systems, providing precise room temperature control by modulating water flow. Built with a high-quality liquid sensor and calibrated in-house, it ensures consistent performance even as heat loads fluctuate. The valve features a durable brass body and a user-friendly thermostatic head with numbered settings for easy adjustment.

## Technical Specifications

### Physical Dimensions

Dimension	Value
Overall Height	128mm
Head Diameter	51mm
Bottom Connection	15mm
Radiator Connection	R1/2

<b>Sensor Technology</b>	Liquid Sensor
<b>Valve Body Material</b>	Brass
<b>Adjustment Settings</b>	Numbered settings from 1 to 5

## Manufacturing & Quality

### Manufacturing Details

- Full-automatic production line
- In-house manufactured liquid sensor
- In-house manufactured head and body
- In-house calibration for all units
