

Thread Ring Gauge for External Thread Verification

This thread ring gauge accurately verifies external thread dimensions. Its hardened tool steel construction ensures durability and dimensional stability.

Product Overview

Professional Thread Verification

This precision-engineered thread ring gauge is designed for the accurate verification of external thread dimensions in industrial applications. Constructed from high-quality hardened tool steel, the tool provides exceptional dimensional stability and durability for rigorous quality control environments. Featuring a knurled outer surface for improved handling and a lapped finish for smooth gauging, it is an essential instrument for maintaining thread accuracy in manufacturing and assembly processes.

Technical Specifications

Available Gauge Types	GO Gauge, NOGO Gauge
Material	Hardened Tool Steel
Surface Finish	Lapped

Application

Primary Applications

- Rebar splicing
- Manufacturing quality control
- Dimensional inspection
- Precision assembly

Compatible Components	Rebar Coupler, Rebar Cap
-----------------------	--------------------------
