

Threading Machine

The threading machine is a robust machine tool designed for precision threading operations. It features a sturdy build with a cast iron base and column, ensuring stability during use.

Product Overview

Professional Threading Solution

The SWJ-6/SWJ-12 is a robust threading machine engineered for precision and reliability in workshops and small-scale production environments. Built with a heavy-duty cast iron base and column, it offers exceptional structural stability during operation. The machine features a powerful motor and variable speed control, ensuring versatile performance across various materials and thread sizes.

Technical Specifications

Safety Equipment

- Chuck guard
- Emergency stop button

Key Operational Features

- Variable speed control
- Adjustable worktable

Available Models

SWJ-6, SWJ-12

Construction

Cast iron base and column
