

Three-Core Cold Shrink Indoor Termination Kit

This three-core termination kit uses cold shrink technology. It is designed for terminating three-core polymeric insulated cables indoors, providing stress control, insulation, and sealing.

Product Overview

Three-Core Cold Shrink Indoor Termination Kit

This three-core indoor termination kit utilizes advanced cold shrink technology to provide reliable performance for medium voltage polymeric insulated cables. Designed specifically for indoor environments, the system integrates essential stress control, insulation, and sealing functions into a single, cohesive solution. The kit ensures consistent cable termination quality, featuring color-coded phase identification for simplified installation and maintenance.

Technical Specifications

Application Environment

Indoor • Medium Voltage

Key Features

- Integrated stress control
- Advanced insulation properties
- Reliable sealing performance
- Cold shrink installation technology
- Color-coded phase identification

Suitable Cable Type

Three-core polymeric insulated cables
