

Three-Phase AC Brush Alternator

This three-phase AC brush alternator provides a reliable power generation solution. It is engineered for stable and efficient performance in various industrial and commercial applications.

Product Overview

STC Series Three-Phase AC Brush Alternator

The STC series three-phase AC synchronous alternator is a robust power generation unit designed for small capacity needs, including lighting in marine environments and household electricity for residential areas. Featuring a salient pole rotating field with self-excitation and constant voltage technology, these alternators ensure stable and reliable performance. Built to international IEC standards, the units are constructed with high-quality magnetic materials and Class B insulation for long-term durability and efficiency.

Technical Specifications

Performance Metrics

50 Hz

Frequency

1500 r/min

Speed

4

Pole Number

Stator Insulation

Class B

Excitation System

Self-excitation, Wave-harmonic, Automatic Voltage Control

Construction

Drip-proof, salient pole rotating field

Operational Standards

Design Standards

IEC Standard

Suitable Regions

- Australia
- Europe
- America
