

Three-Phase AC/DC Electric Welding Machine

This three-phase AC/DC electric welding machine provides both AC power and DC welding capabilities. It is designed for use in industrial and construction settings.

Product Overview

Versatile Power and Welding Solution

The SZF series is a specialized three-phase AC/DC amphibious unit designed to provide both reliable DC arc welding and portable AC power generation. By integrating these capabilities into a single system, it offers a versatile solution for remote work environments. It is engineered to meet rigorous performance standards and is ideal for projects requiring independent power sources.

Technical Specifications

Standards Compliance

JB1372

Application Areas

Primary Applications

- Railway construction
- Bridge and highway building
- Port operations
- Oil and chemical industry
- High-rise urban construction
- Remote site power and lighting

Key Features

Operational Modes

DC Arc Welding • Three-Phase AC Generation • Power & Lighting Output
