

Three-Screw Rotary Positive Displacement Pump

The three-screw rotary positive displacement pump is engineered for pumping various fluids, including lubricating and fuel oils, as well as other viscous liquids. Its screw-type mechanism and robust construction make it ideal for applications requiring high pressure and precise flow control.

Product Overview

Three-Screw Rotary Positive Displacement Pump

This three-screw rotary positive displacement pump is engineered for reliable fluid transfer in demanding industrial environments. Featuring a robust screw-type mechanism, it ensures consistent flow and precise control for a variety of viscous liquids, including lubricating oils, hydraulic fluids, and fuel oils. It is an ideal solution for high-pressure requirements in sectors such as oil and gas, chemical processing, and power generation.

Technical Specifications

Series

3GC Series

Pump Type

Three-Screw Rotary Positive Displacement

Performance & Applications

Target Industries

- Oil and Gas
- Chemical Processing
- Power Generation

Compatible Fluids

Lubricating Oils, Hydraulic Fluids, Fuel Oils, Viscous Liquids
