

Thrust Ball Bearing 591/600 F

This thrust ball bearing is designed to support axial loads in machinery. It consists of hardened washers and a cage containing precision balls for smooth operation.

Product Overview

High-Performance Thrust Ball Bearing

The 591/600 F thrust ball bearing is a precision-engineered component designed specifically to support significant axial loads. These separable bearings consist of two hardened and ground washers with a dedicated ball cage, facilitating efficient load distribution. Ideal for industrial machinery requiring robust axial support, this model ensures smooth operation, reduced friction, and long-term durability in demanding environments.

Technical Details

Design Features

- Separable components
- Hardened and ground raceways
- Precision-engineered ball cage
- High load capacity

Bearing Type

Thrust Ball Bearing

Load Handling

Axial Load Only, Single Direction
