

Tilt Indicator

This tilt indicator detects when an object has been tilted or tipped over. The visual indicator changes to red when tilted, providing immediate notification of a tilt event.

Overview

Tilt Indicator Monitoring

This tilt indicator is a specialized device designed to monitor the orientation of sensitive equipment during shipping, storage, or operation. It provides an immediate visual alert by changing color to red if the object has been tilted or tipped over. This ensures reliable tracking and verification of handling conditions for delicate cargo.

Identification

Model Number	FTM01B
Patent Number	200620077776.4

Operational Features

Alert Mechanism	Visual color change to red upon tilt event
Primary Function	Tilt Detection, Tipping Monitoring, Orientation Tracking
